

## New Lloyd's Register Project Manager

Pending an update to the website, we would like to introduce the new Lloyd's Register NSASS Project Manager - Anderson Chaplow.

Anderson Chaplow is now assigned to the NSASS team as Lloyd's Register EMEA's Project Manager, working with the NSASS Alliance members to manage the implementation of the service. Anderson works with Tim Lear (BMT) to manage the delivery and development of the NSASS framework and associated tasks and takes the lead on those tasks relating to the Naval Ship Code and Naval Ship Rules.

Anderson joined Lloyd's Register EMEA's Naval Liaison Office in 2016 and is responsible for identifying, developing and delivering new products and processes to support UK MoD operations. This involves working with specialist areas of the MoD such as the Naval Authority Group and Project Teams, together with the research community, to prepare proposals for changes to Naval Class and the Naval Ship Rules and to undertake technical activities such as authoring of reports and standards, and project management of consultancy work.

Anderson's experience within Lloyd's Register includes the direct management of new construction projects, including naval vessels; equipment and component inspections; and the survey and management of in-service naval and commercial vessels. His knowledge of ship structures has been developed through plan approval and survey roles and includes extensive experience in the application of the Rules to vessels under construction and in-service – particularly damage, defects and repairs.

The outgoing Project Manager – Ben Cuckson, has now left Lloyd's Register and we wish him every success!

November 2016
